

LINIA COVE **LED** LIGHTING MODULES

LED Lighting Systems are Oracle Lighting's newest contribution to the lighting industry. Linia Cove Led Modules are the most energy efficient and low maintenance light source currently available in the market for linear lighting . By using Linia Cove Led Modules, you use fewer transformers and secondary circuits which will reduce installation expenditures. Linia Cove Led Modules operate from a 24V. VAC magnetic transformer that will enable you to have control over designing the perfect environment from a standard low-voltage dimming system.

Since each module has a porcelain base, the heat is dissipated away from the LED itself which makes Linia Cove Led Modules last approximately 35,000 hours. This maximizes Linia Cove Led Modules' operating life and since they have no filaments, they are able to sustain vibration and not break easily.

Linia Cove Led Modules are considered one of the best light sources as their modules consume only 1Watt each. Linia Cove Led Modules do an excellent job of radiating authentic incandescent light , with 3 different color temperatures **Warm White** (27K) **Cool White** (5K) **Super Cool White** (7K).
